

Aquatic Learning Lab

At Camp Chingachgook on Lake George

Set on the picturesque east shore of Lake George, framed by a mountainous skyline, our Aquatic Learning Lab draws children in as a premier resource for field science.

Here, students engage in scientific discovery of our treasured aquatic ecosystem, Lake George. Thanks to citizen action, environmental regulation, and oversight, Lake George's water quality is the highest rated in New York. Actively monitored through the Jefferson Project, our lake is the subject of intense environmental study.

At YMCA Camp Chingachgook schoolchildren now have a resource to apply their own scientific practice using microscopes, water quality monitoring equipment, data collection, and watershed study. Time at the lab is integrated with our aquatics and ecology classes.

YMCA Camp Chingachgook's Outdoor Education programs help school children from near and far connect with each other and the natural world through **Exploration, Challenge, and Discovery.**
